

Dear sirs

In my view, the inclusion of the combination of the following two components can replace the use of Fish Meal to a great extent in Aqua culture feeds.

1. Meat meal devoid of calcium* (bone)
2. Flex seed (linseed) cake

*Technology for the manufacture of such a meal is already available and published as a book "Animal By-products Utilization through Semi-Moist Rendering", authored by me. For purchase, the publisher of the book has a web site, www.dayabooks.com, which has a simple ordering procedure.

Thanking You

Mahendra Kumar
