

I would like to introduce or development stage company, Oberon FMR, Inc., which is focused on the development of SCPs from Food Processing wastes as an alternative to fishmeal in aquafeeds. We have been developing this concept for several years and we are currently in discussions with several feed manufacturers re: performing additional feeding experiments using our ingredient. We have conducted successful trials (see attached Executive Summary).

In addition to our commercialization efforts, we are interested in identifying funding to further our research to optimize our material, and expand the product to other species.

Please let me know, if our work may be of interest to your programs at NOAA.

Thank you,

*Randy Swenson, CEO*

*Oberon FMR, Inc.*
